HAZE GUIDELINES

AIR QUALITY PROCEDURES

Nexus International School (Singapore) follows the guidance given by the National Environment Agency (NEA) to monitor Pollutants Standards Index(PSI) during haze conditions.The 24 hour PSI readings and the 1-hour PM2.5 readings, as reported on the NEA website, are used to make alterations for the School's programmes. The School's location in the NEA map would be considered "Central". The School uses the NEA readings/guidance as these are specifically developed to address Singapore weather(haze) conditions. More details can be found on the NEA website.

Where Nexus International School (Singapore) holds events off campus, readings shall be taken from the nearest NEA monitoring station.

Haze Monitoring Process:

First check: 24-hour PSI readings at School / Event Location (For next day activities)

Second check: 1h 2.5PM readings at School / Event Location (For immediate activities)

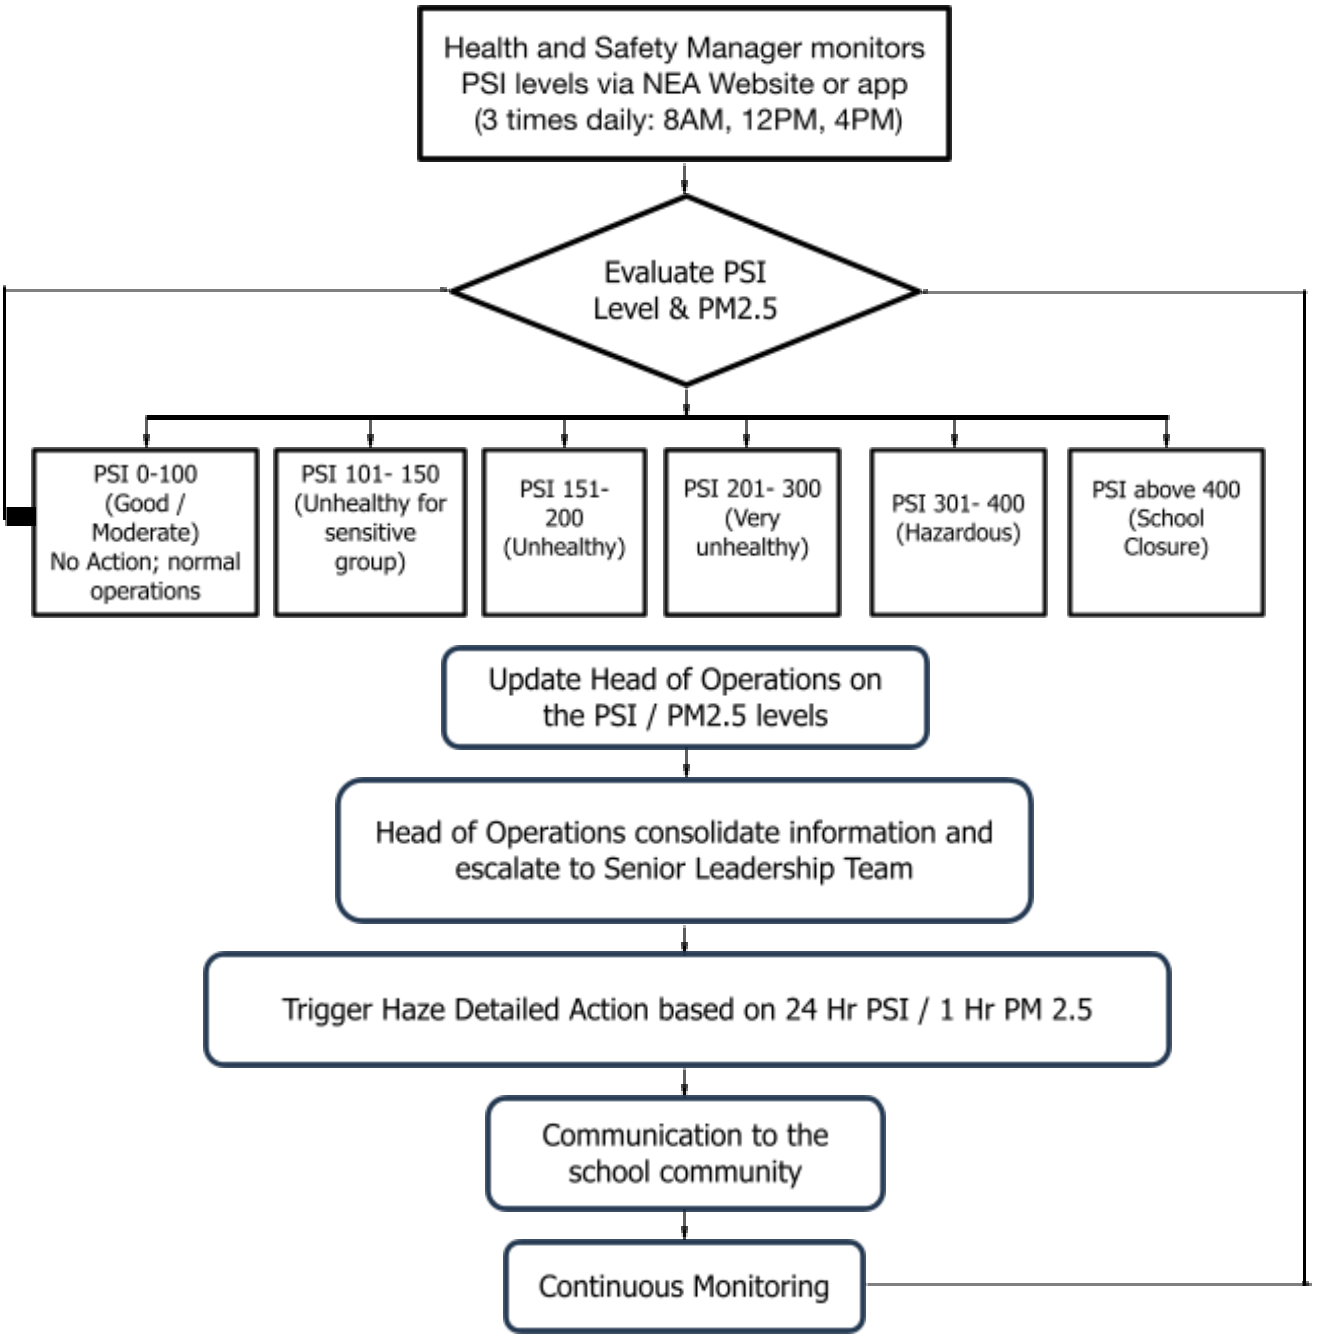

Third check: Review any advice from the NEA

Fourth check: Assess actual conditions at School / Event Location – if conditions appear more severe than indicative NEA's readings, Nexus International School (Singapore) shall determine the next course of action.

During heightened haze levels, the Facilities, Health and Safety Manager will monitor haze readings based on environmental data provided by NEA. The below guidelines shall be referred to in determining actions to be taken. Principal shall communicate school / event decisions and actions using all appropriate channels.

*The School reserves the right to change the guidelines at any time, without prior notice.

TABLE INDICATOR

24 Hour PSI	1 Hour PM2.5	Indicator	Activity guide
0-50	<50	Good	Normal Activities
51-100	<100	Moderate	Minimise prolonged/strenuous outdoor activities for sensitive group
101- 150	>150	Unhealthy for sensitive group	Avoid prolonged/strenuous outdoor activities
151 - 200	>200	Unhealthy	Suspend outdoor activities. Cancel Outdoor CCA. Move meals to indoor
201- 300	>250	Very unhealthy	Stop all strenuous activities (including indoor)
300 > 400	>250	Hazardous	School closure possible or per MOE directives
>400	>250	Hazardous	School closure
